Friedhelm Becker was born in 1952. After successfully finishing the study of chemistry, he worked in a laboratory for examination of construction materials. After that he served the armed forces for eight years. He is retired naval officer. After leaving military services, he served renowned corporations in the field of computer manufacturing (Univac, Sperry, UNISYS) and aerospace (Lockheed-Martin), covering different positions. Computer-aided sensor-effector-integration was his main occupation from 1974 thru 2020.

During his professional career, he acquired and successfully applied numerous qualifications, as e.g.:

- Examination of materials (Minerals, mineral oil products, bituminous materials),
- Development of materials of specified attributes (e.g. watertight lining of a navigable channel),
- Statistics,
- Programming (especially of Real-Time-Systems),
- Lineare programming,
- Digital technology,
- Computer hardware,
- Operating systems
- Real time systems,
- System design,
- Fault analysis (Hardware, software, between system components)

- Quality assurance (software- and system-level),
- Educational techniques and
- Project management

Particularly knowledge of digital technology, computer hardware, operating systems and quality assurance, as well as the application of analytical procedures contributed to elaborate this security solution, and develop it to patent right.
